

General processes:

- Clarification of liquid streams
- Cake filtration with or without precoat / body feed
- Cake washing
 - spray washing (pat.)
 - displacement washing
- Continuous thickening
- Heel volume filtration for batch integrity (pat.)

Dry discharge with FUNDABAC®

Continuous thickening with CONTIBAC®

The dynamic FUNDABAC® filter element

- assures good adherence of cake on element during filtration, heel volume filtration, cake washing and drying
- guarantees efficient solids discharge
- Treats any aggressive or corrosive medium
- reduces maintenance costs drastically

FUNDABAC® filter system installed in a Far-Eastern petrochemical complex

Typical applications:

- Activated carbon
- Catalysts
- Brines
- Polyols
- Corrosive products
- Waste waters
- Pharmaceuticals
- Fine chemicals
- Flue gas cleaning
- Petrochemicals
- Galvanic plating
- Titanium dioxide
